WHO WE ARE

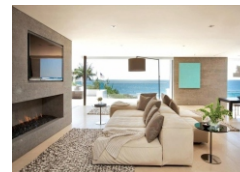

Sri Vasavi Interiors and Exteriors are a team hiding talents in different field of work. Today SVIE team introducing the innovative format of Contraction and Interiors to the people in competitive price. We are proud of our team and look forward to a long and exciting future.

Workplace and work practices have dramatically changed over the years. We work with our clients to help them create new and innovative work environment to meet their requirements using environmentally friendly equipment and practices.

We've grown from being a small scratch level to provide the total best solutions provider. We'd like to help you grow ourselves and mutually.

WHAT WE CAN DO FOR YOU

Corporate Social Responsibility:

Sri Vasavi Interiors and Exteriors are a team hiding talents in different field of work. Today SVIE team introducing the innovative format of Contraction and Interiors to the people in competitive price. We are proud of our team and look forward to a long and exciting future. Workplace and work practices have dramatically changed over the years. We work with our clients to help them create new and innovative work environment to meet their requirements using environmentally friendly equipment and practices.

We the team of SVIE having the Certain rules and responsibility to check the each of the elements of the project, such as soil compaction, vigor of concrete, welding, etc., are traditionally checked or tested by a Branded Company (testing and inspection organizations) like QCI. These tests are conducted during the execution of the work and the quality of the product is tenacious and reported shortly after the tests or inspections are made. The quality of other elements of the project is checked by the Team of Architects, Civil Engineers and Quality Management Team or one of the consultants in the each visit.

The ultimate quality of the product or project is reviewed upto to final completion, or the startup process. The architect and a consultant issues in the list of items that need to be redressed for the project to be certified that it in fact meets the quality prospect set forth by the project documents. There are an astronomically immense number of factors that may influence the efficacy of a project quality management program. Some barriers to prosperous management system implementation at construction organizations involve the very nature of the construction process.

The projects are unique, locations vary, work volume fluctuates, staff changes, the work is labour intensive, the workforce inclines to be transient, projects are subject to transmute and delays, the key team members routinely change, the supply chain is extensive, multiple organizations are involved that have differing visions, values, processes, and practices, weather can vary, some partners fail to distribute on their promises, the industry is generally confrontational rather than cooperative in relationships are driven by general self-interest. In integration, the industry is conservative and slow to embrace change. Most contractors are minuscule and lack sophistication and resources. Efficaciously managing quality becomes challenging due to these and a multitude of other factors.

The construction project quality is managed by a program which has two different elements. One is the quality control (QC) program and the other is the quality assurance (QA) process. These two elements have marginally different functions. Whether you are the project owner, the designer, or the contractor, each has a stake in the efficacy of the QA/QC management process. If the quality of the product comes into question, and rework is required, it can become a costly proposition and may become an issue for the contractor. Some unacceptable quality issues can lead to costly litigation and damage reputations and relationships. Consequently, managing quality is a consequential aspect of a prosperous project distribution process.

The quality control element defines how the contractor expects to manage the quality requisites of the project as defined by the designations. And the quality assurance element define the steps the contractors will take to ascertain it. The first thing contractors need to reassure themselves of is that there is a clear understanding of any nebulous designated quality standard and that workmanship is linked to concrete and quantifiable standards. If there is no way to demystify them or there is intricacy involved in the work, then a mock-up or sample of the work should be made and approved so that it may be utilized as a standard to which subsequent work may be compared. This can additionally provisory subsidiary in managing quality with subcontractors.

Certified Quality Standards:

We pride ourselves on our vigorous corporate convivial responsibility ethos and on how we implement our convivial and environmental initiatives. Total Quality Management (TQM) is a competitive approach to long-term success that's derived from a dedication to customer satisfaction.

Quality: Under Going Membership with ISO, QCI, CREDAI, MSME, KASIA, FKCCI and leading organization.

Environmental, Health and Safety: Doing the particle in ECO friendly products, to meet the Standards in work and good customer satisfaction.

Accreditations don't come easy. We put a lot of work into attaining and maintaining the accreditations that you see on this page. We are very proud to demonstrate to you the high standards we achieve and adhere to.

- **Site Audit:** We conduct a site survey to identify existing services and highlight any structural or building issues.
- **Workplace Audit:** We identify all workflows, evaluate the current layout and highlight the areas that are working and those that require a change.
- **Consultation:** We sit down with key stakeholders and determine their exact needs.
- **Concept Generation:** After the consultation process, we come up with a concept for the area.
- **Concept Review:** With the customer's input, the original proposal is then revised until the optimal design is achieved.

A well-designed workspace is essential. In the design and space planning process we combine our experience and knowledge of ergonomic data with your needs to arrive at a comfortable and safe working environment that also serves your business objectives.

PROJECT SERVICES

TRUST | SAFETY

Project Management:

You may have the right skills lined up to carry out the works, but the time-sapping element of these projects is the managing of the workflow and making sure that everything happens in the right order. SVIE give our clients a single point of contact and an assurance that deadlines will be met though never at the expense of standards

Project Services Commitment:

- We recognise that every client's requirement is unique and we tailor our approach to the specific needs of each client
- Every project we engage in is completed to a high standard
- The project is completed within an agreed budget and timeframe
- Every aspect of the process from design to completion is overseen

We work closely as a team to ensure all aspects of a project, from design through to installation and after-sales support, are delivered to the highest standard of professionalism.

*We've grown from being a small idea and to
make the bigger innovation to give best
standards to our trusted customers*

We'd like to help you grow mutually.
