

SETUP & FEATURE GUIDE

SVIE *Visitor* Dashboard

Complete website visitor intelligence — world map analytics, real-time and GDPR/DPDPA compliant tracking for svie5.com

Version: 1.0

Date: June 2026

Platform: Node.js + Express CMS

Compliance: GDPR · DPDPA 2023

SMS Notify: +91 9513961740

1 What is SVIE Visitor Dashboard?

A built-in website analytics system — similar to Twipla or Google Analytics — but hosted entirely on your own server, with SMS alerts to your phone and zero third-party data sharing.

World Map

Interactive Leaflet.js map showing visitor locations with circles sized by visit count. Click any marker for city details.

Live Charts

Visitor trend line, device breakdown (Desktop/Mobile/Tablet), and traffic source analysis (Direct/Search/Social/Referral).

SMS Alerts

Receive a WhatsApp or SMS notification on +91 9513961740 whenever a new visitor lands on the website.

Ranked Lists

Top countries, top cities (state + country), top pages visited, and browser breakdown — all with visual bars.

Visitor Table

Paginated table of all visit records: time (IST), city with country flag, page, device badge, browser, and session type.

CSV Export

Download all visitor records as a CSV file for external analysis in Excel, Google Sheets, or any BI tool.

Time Filters

Privacy First

CMS Integrated

Filter all charts and data by: 7 Days, 30 Days, 90 Days, 1 Year, or All Time. Data updates live.

Consent banner before any tracking. Full IPs never stored. No cookies. Compliant with GDPR and India's DPDPA 2023.

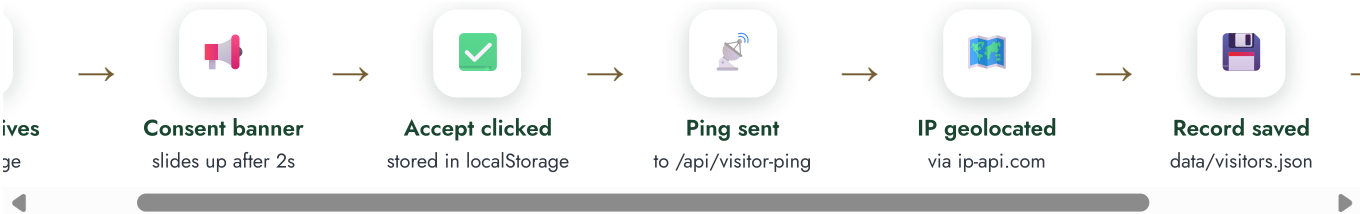

Accessible from the SVIE CMS sidebar under "Analytics". Protected by the same admin login. Data stored in data/visitors.json.

2 How to Access the Dashboard

- 1 **Start the CMS server**
In your project folder, run: `npm start` or `node server.js`
- 2 **Login to the Admin Panel**
Go to `http://localhost:3000/admin` and sign in with your admin credentials.
- 3 **Open the Visitor Dashboard**
Click "**Visitor Dashboard**" in the sidebar under *Analytics*, or navigate directly to:
`http://localhost:3000/admin/visitor-dashboard`
- 4 **On live server (svie5.com)**
Navigate to `https://svie5.com/admin/visitor-dashboard` after logging in.

3 How Visitor Tracking Works

The tracking flow is fully consent-driven. No data is collected without the visitor's explicit permission.

Smart deduplication: The tracker uses `sessionStorage` to avoid sending duplicate pings for the same browser tab. SMS alerts are only sent for *new sessions*, not on every page navigation within the same visit.

What data is recorded per visit:

FIELD	VALUE EXAMPLE	NOTES
Timestamp	2026-06-12T06:31:49Z	UTC, shown as IST in dashboard
IP Masked	103.21.58.0	Last octet removed — full IP never stored
Country	India	From IP geolocation

FIELD	VALUE EXAMPLE	NOTES
Country Code	IN	Used for flag emoji display
Region / State	Karnataka	State-level location
City	Bengaluru	City-level location
Latitude / Lon	12.97, 77.59	Approximate (IP-based)
ISP	Jio Fiber	Internet service provider
Page	/services.html	URL path visited
Referrer	https://google.com	Where they came from
Browser	Chrome	Parsed from User-Agent
Device	Mobile	Desktop / Mobile / Tablet
OS	Android	Operating system
New Session	true	Whether this is a fresh visit

Not collected: Full name, email address, phone number, precise GPS location, cookies, device fingerprint, or any other personally identifiable information. The visitor's full IP address is also NOT stored.

4 SMS / WhatsApp Alert Setup

Alerts are sent via **Twilio**. WhatsApp is recommended for Indian numbers — it works instantly with no DLT registration required.

1 Create a free Twilio account

Visit console.twilio.com and sign up. Your Account SID and Auth Token are on the dashboard homepage.

2 Install Twilio in the project

Run in your project folder:

```
npm install twilio
```

3 Configure your .env file

Create a `.env` file (copy from `.env.example`) and fill in:

```
# Twilio credentials from console.twilio.com
TWILIO_ACCOUNT_SID=ACxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx
```

```

TWILIO_AUTH_TOKEN=xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx

# WhatsApp (recommended for India – no DLT registration needed):
# Sandbox testing (free):
TWILIO_FROM=whatsapp:+14155238886

# OR for standard SMS (requires DLT registration for India):
# TWILIO_FROM=+1xxxxxxxxxx

# Your mobile number to receive alerts:
NOTIFY_PHONE=+919513961740

```

4 **For WhatsApp Sandbox: Send a join message**

WhatsApp +91 9513961740 must send the message `join <sandbox-word>` to **+1 415 523 8886** once. The sandbox word is shown in your Twilio console under Messaging → WhatsApp Sandbox.

5 **Enable alerts from the dashboard**

Restart the server, open the Visitor Dashboard, scroll to *SMS / WhatsApp Notifications*, toggle **Enable Visitor Alerts** ON, and save.

Sample alert message you will receive:

SVIE Visitor

 Bengaluru, India

 /services.html

 Mobile / Chrome

 2:34 PM IST

SMS vs WhatsApp — Comparison

FEATURE	WHATSAPP (VIA TWILIO)	SMS (VIA TWILIO)
Works in India	✔ Yes, immediately	⚠ Requires DLT registration
DLT Registration	Not required	Required by TRAI
Sandbox cost	Free (limited)	Paid
Production	Needs WhatsApp Business API	Standard Twilio number
Recommended	✔ Yes (for India)	Use if already have DLT

5 Legal Compliance

GDPR — EU REGULATION 2016/679

General Data Protection Regulation

- ✓ Explicit consent obtained before any tracking
- ✓ IP addresses anonymised (last octet removed)
- ✓ No cross-site tracking or fingerprinting
- ✓ Data minimisation — only what's necessary
- ✓ Right to erasure (admin can wipe all data)
- ✓ Purpose limitation — analytics only
- ✓ Data stored on-premises (your own server)
- ✓ No transfer to third-party analytics companies

DPDPA 2023 — INDIA

Digital Personal Data Protection Act

- ✓ Free, specific, informed and unambiguous consent
- ✓ Clear notice before data collection
- ✓ Purpose stated: website analytics/performance
- ✓ Consent can be declined (decline button provided)
- ✓ No sensitive personal data collected
- ✓ Right to erasure supported via admin panel
- ✓ Data Principal informed via consent banner
- ✓ Privacy Policy linked in consent banner

What makes this compliant: The consent banner appears before any tracking occurs. If the visitor declines, nothing is recorded. The consent choice is remembered in `localStorage` (not a cookie), so the banner only shows once. Visitors can clear their browser storage to reset consent.

6 API Endpoints Reference

METHOD	ENDPOINT	AUTH?	DESCRIPTION
POST	/api/visitor-ping	No (public)	Called from frontend after consent. Records visit, geolocates IP, sends SMS if new session.
GET	/api/visitor-stats	Yes (admin)	Aggregated analytics: KPIs, map points, charts data. Params: <code>?days=30</code>
GET	/api/visitors	Yes (admin)	Paginated raw visitor records. Params: <code>?days=30&page=1&limit=50</code>
GET	/api/visitor-export	Yes (admin)	Downloads visitor data as CSV file. Params: <code>?days=30</code>
PATCH	/api/visitor-settings	Yes (admin)	Toggle SMS alerts and update notify phone. Body: <code>{smsEnabled, notifyPhone}</code>
DELETE	/api/visitors	Yes (admin)	Permanently delete all visitor records. Irreversible.

7 Files Created / Modified

FILE	STATUS	PURPOSE
<code>visitor-tracker.js</code>	NEW	Frontend consent banner + tracking ping. Added to all 10 public HTML pages.
<code>admin/visitor-dashboard.html</code>	NEW	Full analytics dashboard: map, charts, tables, settings.
<code>admin/visitor-dashboard-guide.html</code>	NEW	This document — setup guide and feature reference.
<code>data/visitors.json</code>	NEW	Visitor records store. Auto-created. Capped at 15,000 records.
<code>.env.example</code>	NEW	Environment variable template. Copy to <code>.env</code> and fill in Twilio credentials.
<code>server.js</code>	UPDATED	Added 6 new API routes, IP masking, geolocation, SMS, CSP update.
<code>admin/dashboard.html</code>	UPDATED	Added "Visitor Dashboard" link in the sidebar under Analytics.
<code>index.html</code> + 9 others	UPDATED	Added <code><script src="/visitor-tracker.js" defer></code> before <code></body></code> .

8 Troubleshooting

ISSUE	SOLUTION
No visitors appearing	Visitors must click "Accept" on the consent banner. Check browser console for errors on <code>/api/visitor-ping</code> .
All locations show "Localhost"	Normal when testing locally. Real IP geolocation only works on the live server (svie5.com).
Map doesn't load	Ensure internet connection (Leaflet loads from cdnjs.cloudflare.com). Check browser console for CSP errors.
SMS not sending	Verify <code>.env</code> has correct Twilio credentials. Run <code>npm install twilio</code> . Check server console for <code>[Visitor SMS]</code> errors.
WhatsApp not receiving	The notify number must have sent the Twilio sandbox join message first. Check Twilio console for message logs.
Dashboard shows "Session Expired"	Log in to the CMS at <code>/admin</code> first. Sessions expire after 8 hours of inactivity.

ISSUE	SOLUTION
CSV export empty	No visitors have consented yet, or the selected time period has no data. Try "All Time" filter.
ip-api.com rate limit	Free tier allows 45 requests/minute. Results are cached for 1 hour per IP. Upgrade to ip-api.com Pro if needed.
